

DigitalOcean Server Setup With Custom Domain Name

Web Server Design | CS 431/531 Fall 2019

Old Dominion University

Department of Computer Science

Kritika Garg, kgarg@odu.edu

- 1. Set up Digital ocean server.**

Welcome, kritikagarg!

To begin, let's create a new project. Projects help you organize your resources by environment, workload, client - however you or your team like to work.

Note: You can change the name, redefine the purpose, and move resources between projects as your needs change.

Create your first project

Name cannot be blank

Enter project name

*

What is your project for?

This information will help us improve the projects experience, based on what you're building.

Select purpose

* ∨

Tell us which tools and technologies you plan to use on DigitalOcean

Your New Droplet: ubuntu-s18

Inbox x

DigitalOcean <support@support.digitalocean.com>

to me ▾

12:10 PM (8 hours ago)

Your new Droplet is all set to go! You can access it using the following credentials:

Droplet Name: ubuntu-s18
IP Address: 192.81.211.229
Username: root
Password: 77e225872259dbbe22ec7a4fa6

Email containing public I.P. and temporary password

For security reasons, you will be required to change this Droplet's root password when you login. You should choose a strong password that will be easy for you to remember, but hard for a computer to guess. You might try creating an alpha-numerical phrase from a memorable sentence (e.g. "I won my first spelling bee at age 7," might become "lwm#1sbaa7"). Random strings of common words, such as "Mousetrap Sandwich Hospital Anecdote," tend to work well, too.

As an added security measure, we also strongly recommend adding an SSH key to your account. You can do that here: <https://cloud.digitalocean.com/settings/security?i=e32b0a>

Once added, you can select your SSH key and use it when creating future Droplets. This eliminates the need for root passwords altogether, and makes your Droplets much less vulnerable to attack.

Happy Coding,
Team DigitalOcean

2. Run a service(echo-server) on the cloud.

(base) kritika@kritika-E6430:~\$ ssh root@192.81.211.229

In terminal,

Ssh root@Public.IP.address

Welcome to DigitalOcean's One-Click Docker Droplet.

To keep this Droplet secure, the UFW firewall is enabled.

All ports are BLOCKED except 22 (SSH), 2375 (Docker) and 2376 (Docker).

* The Docker One-Click Quickstart guide is available at:

<https://do.co/docker1804#start>

* You can SSH to this Droplet in a terminal as root: `ssh root@165.227.196.193`

* Docker is installed and configured per Docker's recommendations:

<https://docs.docker.com/install/linux/docker-ce/ubuntu/>

* Docker Compose is installed and configured per Docker's recommendations:

<https://docs.docker.com/compose/install/#install-compose>

For help and more information, visit <http://do.co/docker1804>

To delete this message of the day: `rm -rf /etc/update-motd.d/99-one-click`

The programs included with the Ubuntu system are free software;
the exact distribution terms for each program are described in the
individual files in `/usr/share/doc/*/copyright`.

Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by
applicable law.
